

CMX 6000

Status Terminal

The CMX-6000 is designed for use in public safety, transportation, and ready mix fleets where dispatch messaging, message creation, and status reporting are desired. The ability to interface with many types of wireless networks, coupled with a sixteen-line display (four lines visible at one time), provides flexibility across many industries.

The CMX 6000 is totally programmable, giving you command of messages tailored to specific businesses or agencies. It features two level status input allowing some additional selection to be made in association with a status.

The tough welded aluminum case ensures reliable operation in extreme environments, and the optional GPS receiver provides the ability for dispatchers to track vehicles, thus enhancing drivers' safety and efficiency. The welded aluminum case ensures reliable use in extreme environments.

Add the optional internal GPS receiver and track the location of every vehicle in your fleet.
