

IQ Map

Mobile Mapping Software

IQ Map is a geographic information, map, and vehicle location system offering a number of system and user-defined features. IQ Map may be utilized as a stand-alone application, or, with the purchase of IQ Mobile, can be a switched-on option.

IQ Map allows the driver to see the current location and/or destination along with auto zoom to keep both in focus. The CAD interface, if utilized, can both place and remove the "where to go" icon on the map. Other functions can be activated at the administrator's control. Support for multiple user-defined agencies, jurisdictions, response areas, and geographic areas are provided. Additionally, user-defined vehicle and location icons are available in .bmp format.

IQ Map can also be used in conjunction with other affordable RadioMobile software and hardware products such as IQ CAD, IQ AVL, and the MCT-8000 to provide a complete mobile data management solution.

IQ AVL can also be used in conjunction with other affordable RadioMobile products such as IQ Mobile, IQ CAD 911,

and the MCT-8000 to provide a complete mobile data management solution.

IQ Map features:

- Graphical User Interface (GUI)
- Support for multiple vehicle types and certifications
- Graphical vehicle tracking and position reporting
- User-defined geographical areas and locations ("Points Of Interest")
- Multiple-level Operating System and application software security
- Support for the Emergency Notification Button for AVL-equipped vehicles
- Wireless Computer Aided Dispatching based on visual location of unit on map
- Call location display based on ANI or manual address entry
- Mouse drag and drop dispatching
- Allows the driver to see current location, destination, or both
- Graphically painted directions to the destination along with written directions if desired
